DevRabbit

DevRabbit

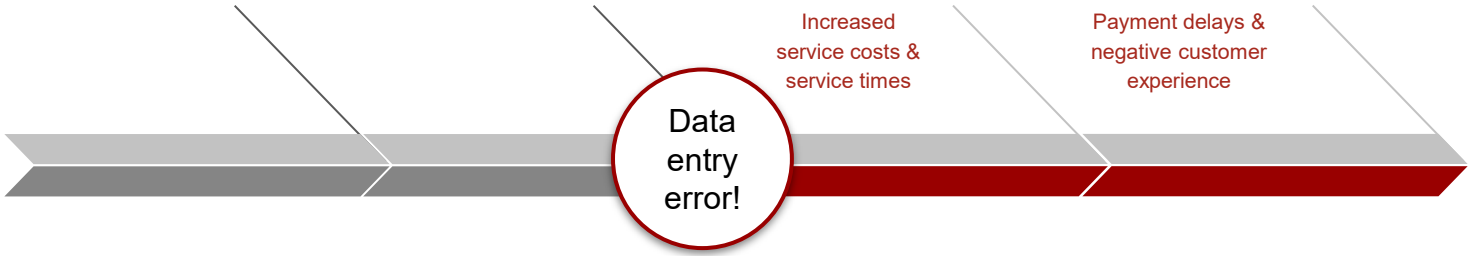
Workflow before DevRabbit



Receive work order

Work order received via email, client system, phone call, etc.

Re-key order

Manually rekey work order in FM order system.

Technician deployment issues

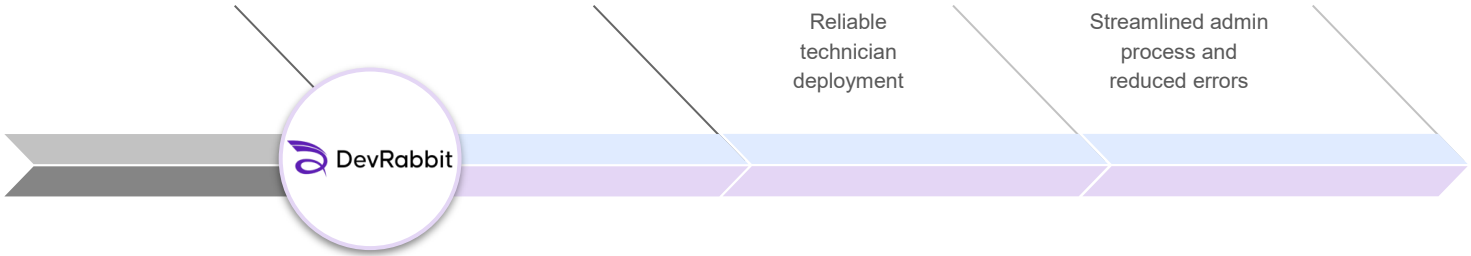
Incorrect data entry (e.g. incorrect address or contact person, location doesn't exist).

Invoicing issues

Incorrect email, contact person, payment terms, etc.

DevRabbit

Workflow after DevRabbit



Receive work order

Work order received via email, client system, phone call, etc.

Auto-sent to central system

Connector Tool automatically updates systems with no manual data entry required.

Technician deployed successfully

Technicians are deployed to service job with correct information.

Successful service completion & invoice

Invoice is sent with accurate payment information to the correct contact.

DevRabbit Middleware Connector: Integrations

- No-code integration platform
- Connects CMMS, ERP, CRM, Lease, IoT, and AI platforms
- Real-time or scheduled syncs
- Exception handling with error logging and auto-retry
- Full activity tracking and audit logs
- Multi-directional data flows (one-to-one, one-to-many)
- Secure API authentication (OAuth, API keys, SSO)
- SLA monitoring and KPI dashboards
- Scalable from small integrations to enterprise-wide orchestration
- No cost connector research and API assessments

DevRabbit

Case Study

Challenge

MDS used 2 different systems to manage operations, Corrigo and Dataforma. However, these platforms weren't integrated and didn’t communicate with each other. This lead to having to re-key data between systems, which increased errors, wasted time and created inefficiencies.

Solution

After thorough workflow and system requirements analysis, DevRabbit proposed a custom middleware tool to integrate the two systems with the following key features:

Automated work orders and project data sync

Automated data transfer

Customized workflows

Opportunity for scaling systems

Results

50% **Reduction** in administrative work

90% **Decrease** in data entry errors

Improved project management

Enhanced decision making
